Web developers work independently as freelancers or with company teams to create websites. Depending on the job, these professionals may focus on front-end development, which involves designing sites and producing content, or back-end development, which involves writing code to make website features work. Web developers may also become webmasters for a site, providing maintenance, updates, and troubleshooting when needed. Prospective web developers can use the following information to choose a career path and understand the required steps for that career, such as completing education and understanding potential web developer roles and contexts. Read on to learn about the daily tasks and skills of a web developer, available career resources, and salary information.

A Software Engineer who loves to transform ideas into reality using coding. I have Good knowledge of Agile Methodologies, Cloud Aws, Software Development.
